

Reflection

Assignment -1

Part 1

As you begin, evaluate your goals and expectations for the capstone. Ask yourself the following questions:

- What do you hope to take away from this capstone project? What is one important skill you think you'll learn?

Ans: I hope to create a strong project that will be valuable for my résumé. This capstone project will help me showcase my skills related to data science and data analysis. One important skill I expect to learn is teamwork, as this capstone is a team-based project.

- Which skills do you most look forward to demonstrating?

Ans: Through this project, I look forward to demonstrating multiple technical skills, including Python and data visualization tools such as Tableau. I also aim to showcase a high level of understanding of data analysis concepts.

- What are some issues you might encounter?

Ans: Some issues I might encounter include:

- Challenges in team management due to differing schedules among team members.
- The need to improve my own knowledge in order to better support my team members.
- Potential time management difficulties because of my part-time job and other course loads occurring simultaneously; however, I will make my best effort to manage my time effectively.

Reflection [6 marks]

Now, write 3-5 sentences (60-100 words) reflecting on the previous questions. At the end of this course, review your responses and observe how your understanding of data analytics projects has changed. What did you learn? How will you use the lessons you learned in future data analytics projects?

This reflection helped me clarify my goals and expectations for the capstone project. I realized that beyond building a strong project for my résumé, I will gain valuable experience in teamwork, time management, and applying data analytics tools such as Python and Tableau in a real-world setting. Throughout this course, I expect my understanding of data analytics projects to deepen, especially in managing team-based work and overcoming challenges. The lessons learned will help me approach future data analytics projects with better planning, collaboration, and technical confidence.

Part -2

The capstone project will be completed in groups of three or four students. Please use the Groups tab on Blackboard to select your group. Group selection will be open from Monday, January 6 to Tuesday, January 14.

I have joined group 2 for this capstone project.
